

## Superdane

2 types of Composition available(Lindane 1.3% WP and lindane 6.5% WP)

### Composition

Name of The active ingredient	Percentage in W/W
Lindane Technical	1.3%
Inert Ingredients	98.7%
Total	100%

**Chemical Class:** Organophosphate

**Introduction :** Lindane is an organochlorine insecticide and fumigant which has been used on a wide range of soil-dwelling and plant-eating (phytophagous) insects. It is commonly used on a wide variety of crops, in warehouses, in public health to control insect-borne diseases, and (with fungicides) as a seed treatment. Lindane is also presently used in lotions, creams, and shampoos for the control of lice and mites (scabies) in humans.

Technical lindane is comprised of the gamma-isomer of hexachlorocyclohexane, HCH. Five other isomers (molecules with a unique structural arrangement, but identical chemical formulas) of HCH are commonly found in technical lindane, but the gamma-isomer is the predominant one, comprising at least 99% of the mixture of isomers. Data presented in this profile are for the technical product unless otherwise stated; lindane, HCH, or BHC refer to technical lindane, i.e., Gamma-hexachlorocyclohexane. Gamma-HCH has been shown to be the insecticidally effective isomer.

Lindane may also be found in formulations with a host of fungicides and insecticides. It is available as a suspension, emulsifiable concentrate, fumigant, seed treatment, wettable and dustable powder, and ultra low volume (ULV) liquid.

### Composition For lindane 6.5%

Name of The active ingredient	Percentage in W/W
Gama Isomer of BHC	6.6%
Other inert ingredients-	93.4 %
Total	100%

**Formulation:** Lindane may also be found in formulations with a host of fungicides and

insecticides. It is available as a wettable powder.

**Target Crops:-**

**All cereals**, Vegetables, fruit crops, Plantation crops

**Target Pests:** Termites and soil borne pests in particular

**Manufactured by :Super Agro India Pvt Ltd**

**Address : 168/2, Lenin Sarani, Kolkata-700 013**
