Target crops : Mango only

Classification and mode of action :Trasco Mango special is a foliar spray for Mango plants containing specific micronutrients meant for Mango plants along with growth promoters and specific hormones needed for Mango plants to give the best plant growth and yield.

Product Potential: Mango cultivation has been taken up on a large commercial scale. The use of improved jats, have become very popular with the farmers. The farmers have to have the specific product required crop wise and can no longer benefit from common products that supply blanket needs of plants. Mango special has been developed to fulfill this need. When this is applied to the Mango plants the plants show extra vigor and growth, , they utilize the food to the fullest extent and the yields they give are as per the specification laid down by the seed suppliers. Mango special is a special product meant for Mango crop only. There will be proper maturity of the crop with excellent quality characters. The Mango fruit will be having the full size. The fruits will be having quality character; the crop will be less vulnerable to diseases due to unfavorable conditions at times. The bearing character per plant will be uniform. The Mango plant will be less prone to some diseases.
